

BOOK REVIEW

THE MISUNDERSTOOD CHILD

By

LARRY B. SILVER, M.D.

This is a well organized book that can help parents of Children who are learning disabled. It will help parents, teachers and other people who interact with your child on a day to day basis to better understand the learning process that children with learning disabilities deal with in their every day life.

Many times, even the teachers are unsure of how to deal with and help these children. Sometimes it is the teaching method that needs to be addressed so the child can better understand information. This book discusses the many learning disabilities that children can experience with ADHD and other disabilities. It also, helps you to understand how to advocate for them. I would recommend this book to anyone with children with learning disabilities and especially ADD/ADHD.
